Carbon monoxide, or CO, is a poisonous gas that can be particularly dangerous because it is colorless and odorless. Headache, nausea, dizziness and even permanent brain damage or death can occur. Educate your family about the causes of CO poisoning and how to prevent exposure to this deadly gas. To prevent CO poisoning in your home, be sure to take the following precautions:

- Do not use portable generators indoors, including in garages, carports, storage sheds and the like, even with doors and windows open. CO can quickly build to lethal levels in even partially enclosed spaces.
- Do not place pressure washer engines indoors, and, when using pressure washers outdoors, keep engines away from open windows, doors or vents during use, as CO can seep inside through the openings.
- Hire qualified professionals to install new furnaces and appliances and to inspect and service your HVAC system, chimneys and flues.
- Never service fuel-burning appliances without proper knowledge, skills and tools. Always refer to the owners’ manual when performing minor adjustments or performing maintenance on fuel-burning equipment.
- Never use portable fuel-burning camping equipment or burn charcoal indoors.
- Never leave a car running in a garage, even with the garage door open.
- Never use your gas oven or clothes dryer to heat your home.
- Never operate unvented fuel-burning appliances in any room where people are sleeping.
- Do not cover the bottom of natural gas or propane ovens with aluminum foil. Doing so blocks the air flow through the appliance and can produce CO.
- Install CO detectors throughout your home, especially in hallways near sleeping areas, and follow the manufacturers’ instructions for testing and replacing. Keep detectors unobstructed by furniture or draperies.
